Individual	3,060	32%
TOTAL:-	3,141	100%

Stock Market & Fund Performance Review

The benchmark KMI-30 index posted a return of 15.53%, and closed the fiscal year at 66,163 points. Average daily trading volume declined by 3.1% to clock in at 208mn shares. On the other hand, average daily traded value registered a decline of 14.3% to USD91mn, as participants remained focused on mid-tier stocks. The performance of stock markets presented a mixed trend during the first three quarters of the fiscal year mainly due to recession in oil prices internationally and selling pressure by the foreign funds managers. However, the market benchmark KSE-100 index resumed its momentum from the start of the last quarter of the 2015-16 when the KSE-100 witnessed all time high levels. The relatively better performance of the Pakistan stock market during the last quarter of the fiscal year can be attributed to a number of positive factors including stable macroeconomic indicators, relative stable exchange rate, downward inflationary trend, prudent monetary policies and Pakistan's reclassification from a frontier market to an emerging market. During FY 16, foreign investors remained net sellers to the extent of USD 282 million. Despite hefty outflow from foreigners, stability in Pakistan's equity market is reflective of consistently improving macroeconomic fundamentals of Pakistan as well as the potential inherent in the market which has kept it resilient so far. During the period under review, Pakistan's stock market entered in a new era of equity trading after merger of KSE, LSE and ISE into PSX. Its basic purpose is to enhance operating efficiency of Pakistan's Capital Market and provide investors, listed companies and trading right entitlement certificate (TREC) holders with a single, deep liquidity pool and fully integrated national trading platform. This will also raise the profile of Pakistan Capital Market internationally, encourage cross listing and global capital raising by Pakistani companies, enhance systems and operations towards global best practices.

Relative Performance of NAV vs. KMI 30

During the period under review, the KMI-30 index increased by 15.53% whereas the NAV of your Fund increased by 5.78%, resulting in a slight under performance of 9.75%.

Performance of Fund Since Inception

	FY 2015*	FY 2016	Since Inception
NIT-IEF (%)	2.70%	5.78%	8.60%
KMI-30 (%)	1.98%	15.53 %	22.26%
Dividend Per Unit (Rs.)	0.00	0.42	

***Launched on May 18, 2015**

For details, investors are advised to read the latest Financial Statement of the Scheme.

Economic Review

Pakistan's economy continues to maintain its growth momentum for the 3rd year in a row with real GDP growing at 4.7% in FY 2015-16 which is the highest in eight years. Economic growth is showing signs of sustained recovery aided by falling commodity and fuel prices, increased energy availability and improved security conditions. A strong performance from the industry and services sector led this growth in GDP. Agriculture, on the other hand, suffered particularly due to decline in agricultural growth (-0.19) % mainly due to decrease in production of cotton, rice and maize. Industrial growth accelerated on the back of higher activity in large-scale manufacturing and construction, the latter being driven primarily by initiation of China Pakistan Economic Corridor (CPEC) infrastructure and energy projects.

Agriculture sector is a vital component of Pakistan's economy as it contributes 19.8 % in GDP and it remains the largest employer absorbing 42.3 % of the country's total labor force. During FY 2015-16, the performance of agriculture sector as a whole remained dismal as it witnessed a growth of (-0.19) % against 2.9 % growth during the same period last year. According to the economic Survey of Pakistan, the growth of sub Sector of crops included important crops, other crops and cotton ginning remained negative while the other sub component of Agriculture sector like Livestock, Forestry and Fishing posted positive growth of 3.63 %, 8.84 % and 3.25 %, respectively.

Manufacturing is the second largest sector of the economy accounting for 13.6 % of Gross Domestic Product (GDP). This sector provides employment opportunities of 15.3 % to the total labor force. On average during FY 2015-16, Industrial growth was recorded at 6.8 % as compared to 3.6 % in the comparable period of last year. This growth was achieved due to the robust domestic demand that helped the industry to post strong growth in FY2015-16. From the

supply side, continued low prices of key raw materials (POL, coal, palm oil), low financing cost, better law and order, and improved energy supplies supported growth in the industrial sector.

Services sector also met the planned target and has emerged as the most significant driver of economic growth. The share of the services sector has increased from 56.6 % of GDP in FY 2009 to 59.16 % in FY 2015-16. Services sector has witnessed a growth of 5.7 % in this fiscal year as compared to 5 % last year. Services sector performance remained broad based, as all components of services contributed positively.

During FY 2015-16, a net foreign direct investment was recorded at US\$ 1.9 billion with growth of 5.4 %. The major inflow of FDI was from US, Hong Kong, UK, Switzerland and UAE. Oil & gas exploration, financial business, power, communications and Chemicals remained the major sectors for foreign investor's inflow.

FY2015-16 also witnessed growth of 6 % in Worker's remittances over last year. During the period, the remittances reached to US\$ 19.9 billion as compared to US\$ 18.7 billion last year.

Inflation during FY 2015-16 has been contained at 2.9 %, which is the lowest in 13 years. Food and non-food inflation have been estimated at 2.1 % and 3.4 %. The slower increase in food inflation over the previous year is due to moderate increase in prices of major consumable food items. The core inflation has also been anchored through appropriate fiscal and monetary measures.

Export competitiveness continued to suffer, with exports declining to USD 22 billion in FY16, as against USD 24 billion in FY15. Despite reduction in petroleum imports by USD 4.5 billion, mainly due to lower oil prices, overall import bill only reduced marginally to USD 40.5 billion in FY16, relative to USD 41.3 billion in FY15. Trade deficit deteriorated to USD 18.5 billion in FY16, mainly due to lower exports.

Looking ahead, we expect the KSE-100 index to post healthy returns in FY17. Large foreign inflows are expected to move towards Pakistan's stock market as EM index-tracking funds would rebalance portfolios to include Pakistani stocks with official inclusion slated for May' 17. Further, the prevailing development theme under China-Pak Economic corridor (CPEC) would keep focus towards infrastructure related sectors (Cement, Steel, Power & IT). Moreover, PSX's strategic divestment to foreign investors is also likely to further bring our bourse into the limelight.
